DEAR :

Having worked at government organization for the past 6+ years, the role at F.D.R.E. POESSA would be ideal for my mix of system administrator and IT expert experience.

My responsibilities have included installation and maintenance and function testing of new hardware and software, configuration of virtual networks and design and implementation of innovative platforms. I am proficient at writing standard operating procedures for colleagues and partners and regularly led seminars on technology and cyber security.

System security was a significant part of my remit in my previous role, and I have comprehensive experience of dealing with cyber-attacks that have targeted customer bases and corporate information. My priority will be to ensure the integrity of your systems and keep your data safe.

My computer science degree from Hawassa University was just the start of an ongoing I.T. education that started with Programming and has most recent seen me become System Administrator and IT expert. The deep knowledge required for our profession is always getting deeper, and I enjoy taking on new knowledge.

My attention to detail and ability to communicate complex issues in a simple way brought two promotions my way in my previous role and I think that I will be able to bring a new visibility to systems management in this high-profile role.

Sincerely,
Said Barsido Adem
